

Major UAE Government Agencies' Kas**** Accounts for Sale on Dark Web

- On January 1, a post was published on the Dark Web forum BreachForums, offering account access linked to Russian cybersecurity company Kas**** products, used by the IT departments of major UAE government agencies.
- The threat actor 'Corps' claimed that access to these accounts grants full administrative control, including the ability to monitor, modify, or disable security protocols. Access to the IT departments' email accounts was also for sale, with both offered for USD 10,000.
- According to S2W XARVIS's profiling tool 'Dark Spider', the 'Corps' has conducted cyberattacks targeting financial institutions and private companies in the oil and gas sectors across countries such as Israel, Saudi Arabia, and Morocco.

RMA Data of Taiwanese Hardware Firm with Sensitive Customer Details Sold on Dark Web

- On January 1, the data related to Return Merchandise Authorization (RMA) services of M**, a global computer manufacturer based in Taiwan, was posted on BreachForums.
- The threat actor, identified as 'fastcatlarry,' disclosed that the data includes 560,000 RMA service requests from the past 10 years, and 30,000 customers records with personal details such as names, addresses, countries, phone numbers, and email addresses.
- The threat actor 'fastcatlarry' claimed that the stolen information was retrieved from a website operated by M** and S2W's review showed that the site is currently inaccessible.
